Special Note

- On some occasions when dialing a number using the autopatch direct dial mode, the local phone system will not accept all the tones generated by your radio. If this happens, you will here a recorded message asking you to try again or some such thing. Should this happen to you, press <#> to disconnect, and listen for END in CW. Then simply press <*><9> and the computer will redial that number for you. The computer will process your call the same as it does a speed dial entry. Use this procedure whenever you have problems with a direct dial entry.
